

# Random ODE-Net (R-MLP)

- Sample  $(w_1, b_1)$
- Solve  $(w_2, b_2) = \underset{w, b}{\operatorname{argmin}} \|A \cdot \begin{pmatrix} w \\ b \end{pmatrix} - y\|$

where  $A = [\phi(x) \ 1]$  ,  $y = [\dot{x}]$

$\Rightarrow$  approximates  $\dot{x} = [\dot{q} \ \dot{p}]^T$
